# PureLine DC PH

UV DECHLORINATION FOR FOOD AND BEVERAGE

Our **PureLine DC PH** UV systems deliver guaranteed high UV doses for effective free chlorine removal and treatment for thefood and beverage industries. By using UV to remove the free chlorine we protect RO membranes from both residual chlorine and biofouling. UV dechlorination provides distinct advantages over traditional technologies such as Activated Carbon Filtration (ACF) or Sodium Metabisulphite dosing (SMB). These proven chlorine removal methods are prone to microbial contamination and require signifi antly more operator involvement and plant room space than UV, leading to higher lifetime costs.

## POTENTIAL LOCATION OF THE PURELINE DC PH™

KEY FEATURES	WHAT IT GIVES YOU	BENEFITS FOR YOU			
INTELLIGENCE					
UV intensity monitor	Continuous verification of performance with in-built low intensity alarm	Easy to monitor and log system performance			
OPTIMISATION					
Medium pressure lamp	Provides high intensity UV light at 200 to 400 nm wavelengths ideal for the destruction of free chlorine (HOCl and OCl-)	Prolongs the life of RO equipment by removing free chlorine			
	Chemical free reduction of free chlorine	No risk of contamination or running out of chemical			
	Unlike ACF does not require backwashing or media replacement	Saves on water and maintenance costs			
	Provides high intensity germicidal wavelengths to treat the water	Prolongs the life of RO equipment compared to ACF by reducing the bio-burden			
Designed for the food and beverage industry	FDA-approved materials used for all wetted parts	Industry compliant materials			
	*Chamber with <0.38 µm internal surface finish and tri-clamp connections	Sanitary design			
	*Automatic wiper (quartz cleaning)	Self cleaning to maintain performance			
INTEGRATION					
Compact design	Can be fitted to skids	Easy integration			
	Can be retrofitted to existing process
